

ABSTRACT

A computer enclosure includes a chassis (10), a mounting apparatus (40) and a movable plate (70). The chassis comprises a bottom plate (12) and a front plate (18). The mounting apparatus comprises a first bracket (42) receiving a plurality of disk drives and a fixed plate (60) below the first bracket. The movable plate is detachably attached to the front plate below the first bracket opposite to the fixed plate. The movable plate comprises a first flange (86) and a second flange (78) at two opposite ends thereof for attaching to the bottom plate and the first bracket securely. In assembly, the fixed plate and the movable plate cooperates to form a second bracket for receive a plurality of disk drives (100) therein securely.
